

Assignment – JDBC

Refactor – ToDo-It

This Assignment...

- should come with a corresponding MySQL database prebuild.
"MySQL - Workbench - todoit.zip"
- is about refactoring and JDBC. (*Java Database Connectivity*)
- does not demand you to test JDBC.

Table of content

In rough terms

1. Create database with corresponding SQL *"todoit.sql"*.
2. Clone or branch an already created Todo application.
3. Make sure you have the correct drivers in place in order to use JDBC.
4. Refactor and make sure your models are matching the tables in MySQL.
5. Refactor People and TodoItems as of UML Diagram below.
6. Implement your Interfaces and make sure they work well with you Database.
